The top screenshot shows a web browser window with the URL `https://localhost:44311/WebService1.aspx?op=R2D`. The page title is "WebService1". Below the title, there is a link "Click [here](#) for a complete list of operations." The "Test" section is active, showing a parameter "rupees" with a value of "456" and an "Invoke" button. Below the "Test" section, there is a "SOAP 1.1" section showing a sample SOAP 1.1 request and response. The request is a POST to `/WebService1.aspx` with a SOAP envelope. The response is an HTTP 200 OK with a SOAP envelope containing a `R2DResult` of `5.5609756097560972`.

The bottom screenshot shows the same web browser window, but the URL is `https://localhost:44311/WebService1.aspx/R2D`. The page displays the XML response: `<double xmlns="http://tempuri.org/">5.5609756097560972</double>`. A "Storage settings" notification is visible in the bottom right corner, stating "We've turned on Storage Sense. To optimize storage usage, we've turned on Storage Sense for you."
